# About cyberonkel's world

Play together, living creativity, without sending a lot of data to Microslop – that was the intention as this server was established. Running on a VPS with enough performance, we have now a connected mapserver. The server runs in survival mode, but player willing to stay for a longer period and having bigger projects can ask for worldedit privs.

Some actual builds on our server:

# URL, Port, Register

The server can be found in Luanti as [mine.mavori.ch](https://mine.mavori.ch). Choose **30001** as port. If you visit the server the first time, you have to register with a username.

[Bildschirmfoto 2025-08-21 um 11.11.50.png](#)

# Mods

As in all Luant games, the game itself consists of several mods. The functionality in the game can be extended by additional mods. Available mods for Luant can be found in the [Luant-ContentDB](#). Many mods found there have a dependency of default (a basic mod in mintest-game) and will not run in VoxeLibre. We have adapted a few of them to be used in VoxeLibre here.

The following mods are currently installed on our server:

## Basic Mods

- xcompat
- death\_pos
- [sethome](#)
- day\_coin\_vote
- areas
- currency
- [woodcutting](#)
- tpr
- i3

## Mobility

- [advtrains package](#)
- moreslopes
- tunnelmaker
- railbuilder
- airutils
- pa28
- supercub
- hidroplane
- heli

## Mixed content

- vlbridger
- greektemple
- sign
- pipeworks
- mixednodes
- display\_modpack

- worldedit

If you need additional mods to bring your ideas to life, please ask mavori.

# Overview Map

A basic overview over the railway system and a few important points in our world. We have a mapserver running connected to our world. To see this more detailed and interactive map, please have a look here: <https://mavori.ch/map>

# Mapserver

We have now a mapserver active. This is a nearly real-time map of our world, as it has been explored until now. Mapserver can be found here: <https://mavori.ch/map>. Click on a train station (colored filled circle) shows the name of this station. Most of the time, there is a village with the same name not far away.

Additional points (e.g. Points of Interest) can be added with mapserver blocks in the inventory.
